SantéPURE-LC™

L-Carnitine 500mg + Methylcobalamin 1500mcg + Folic Acid 1.5mg TABLET

L-Carnitine Bone Health

*L-carnitine can influence bone density and slow the rate of bone turnover. One study shows that subcutaneous injections of L-carnitine reduced bone loss in ovariectomised rats.**

*International Journal of Pharmacology, Vol 11 (2), 2015:148-151

L-Carnitine in Nerve Health

*Improves pain, nerve regeneration, and vibratory perception in patients with chronic diabetic neuropathy, helps to maintain the myelin sheath, has shown a neuroprotective effect in patients with peripheral neuropathies of different etiologies***

**J Pain Res. 2019; 12: 1341-1351.

Methylcobalamin

*Synthesis of methionine and S-adenosylmethionine for integrity of myelin, neuronal function, proper red blood cell formation and DNA synthesis, improves Alzheimer disease, Parkinsonism, Dementia and neuropathic syndromes and peripheral neuropathy.****

L-Carnitine 500mg + Methylcobalamin 1500mcg + Folic Acid 1.5mg TABLET

L-Carnitine in Female

Several studies found that LC supplementation improves disorders such as polycystic ovary syndrome, endometriosis and amenorrhea. Carnitines are reported to increase gonadotropins and sex hormone levels as well as improve oocyte health*

*Reproductive Biology and Endocrinology volume 16, Article number: 5 (2018)

L-Carnitine in Male

L-carnitine increases sperm motility by changing in fatty acid metabolism. Mitochondria in the middle piece of the sperm involve in fatty acid metabolism. L-carnitine and LAC act as buffering system to adjust acetyl-CoA concentration**

**Iran J Reprod Med. 2012 Mar; 16(2): 77-82.

Doses of 500 to 1,000 mg/day of acetyl-L-carnitine have produced increases of sperm count, motility, straight-swimming ability, as well as total normal sperm forms in clinical studies***
